BS in Computer Science

University of North Carolina at Greensboro

### SENIOR SOFTWARE ENGINEER | LINKEDIN

September 2022 - Present

- Lead UI engineer on the Customer Support Portal Application overseeing: architecture, feature development, code reviews, on-call resourcing, delivery planning, and stakeholder interactions.
- Own the development of a reusable component to encompass the tax collection workflow for collecting tax IDs of any jurisdiction during LinkedIn Member Self-Service checkout; scaled component across 4 different products
- Manage the development of a reusable form for customer creation and verification to enable LinkedIn members with a complete self-service path to making ad campaigns
- Mentor junior developers to foster professional development and offer guidance toward their career goals
- Architected relational databases for customer verification processes that will be utilized across the B2B organization

### SOFTWARE ENGINEER | LINKEDIN

April 2021 - September 2022

- Implemented UI features on an EmberJS application which led to reduced tooling required by LinkedIn customer support
- Created APIs for CRUD operations allowing LinkedIn members to self-manage subscriptions which significantly reduced the volume of customer support calls

### PROGRAM MANAGER | VANGUARD

January 2020 - April 2021

- Managed the Technology Leadership Program – establishing a new interview process that appealed to a diversified talent pool
- Supported 6 direct reports – creating personalized development plans, advising and providing opportunities on their goals, technical mentorship, and completing performance reviews

### TECHNICAL LEAD | VANGUARD

April 2019 - January 2020

- Led the feature development of a full-stack application focused on portfolio modeling and scenario analysis which helped retain over \$8B in investments
- Supervised development tasks of 5 engineers which included technical training, leading Agile ceremonies, and code reviews

### SENIOR SOFTWARE ENGINEER | VANGUARD

August 2018 - April 2019

- Optimized the backend of a monolithic application by partitioning it into Java microservices
- Led migration efforts of a frontend tool from AngularJS to Angular 2+
- Architected the Angular 2+ implementation standards – managing resources against different migration tasks, and communicating with stakeholders on timelines

### SOFTWARE ENGINEER | VANGUARD

January 2015 - August 2018

- Participated in the Technology Leadership Program, completing the competitive 2-year software development program, while rotating departments every 8 months to foster rapid growth of technical & leadership skills
- Contributed to a Java batch application – creating several portfolio rebalancing rules that reduced investment risks
- Created reusable ADA-compliant frontend components with AngularJS & Angular 2+ that were utilized by other teams within the company, ultimately increasing their speed to market
